

We've got some exciting news to share!

*Assisted Living, Adult Day Program
& Memory Care Services*

What makes you happy?

For most Seniors, it's living life on your own terms.

Enjoying friends and family.

Feeling safe and secure.

But sometimes...worrying you might not get help if needed can seriously undermine your quality of life.

That's why our community takes
extraordinary steps to monitor your
well-being
24-hours a day.

Introducing...

QuietCare[®] from GE Healthcare

Enhancing
the quality
of your care.

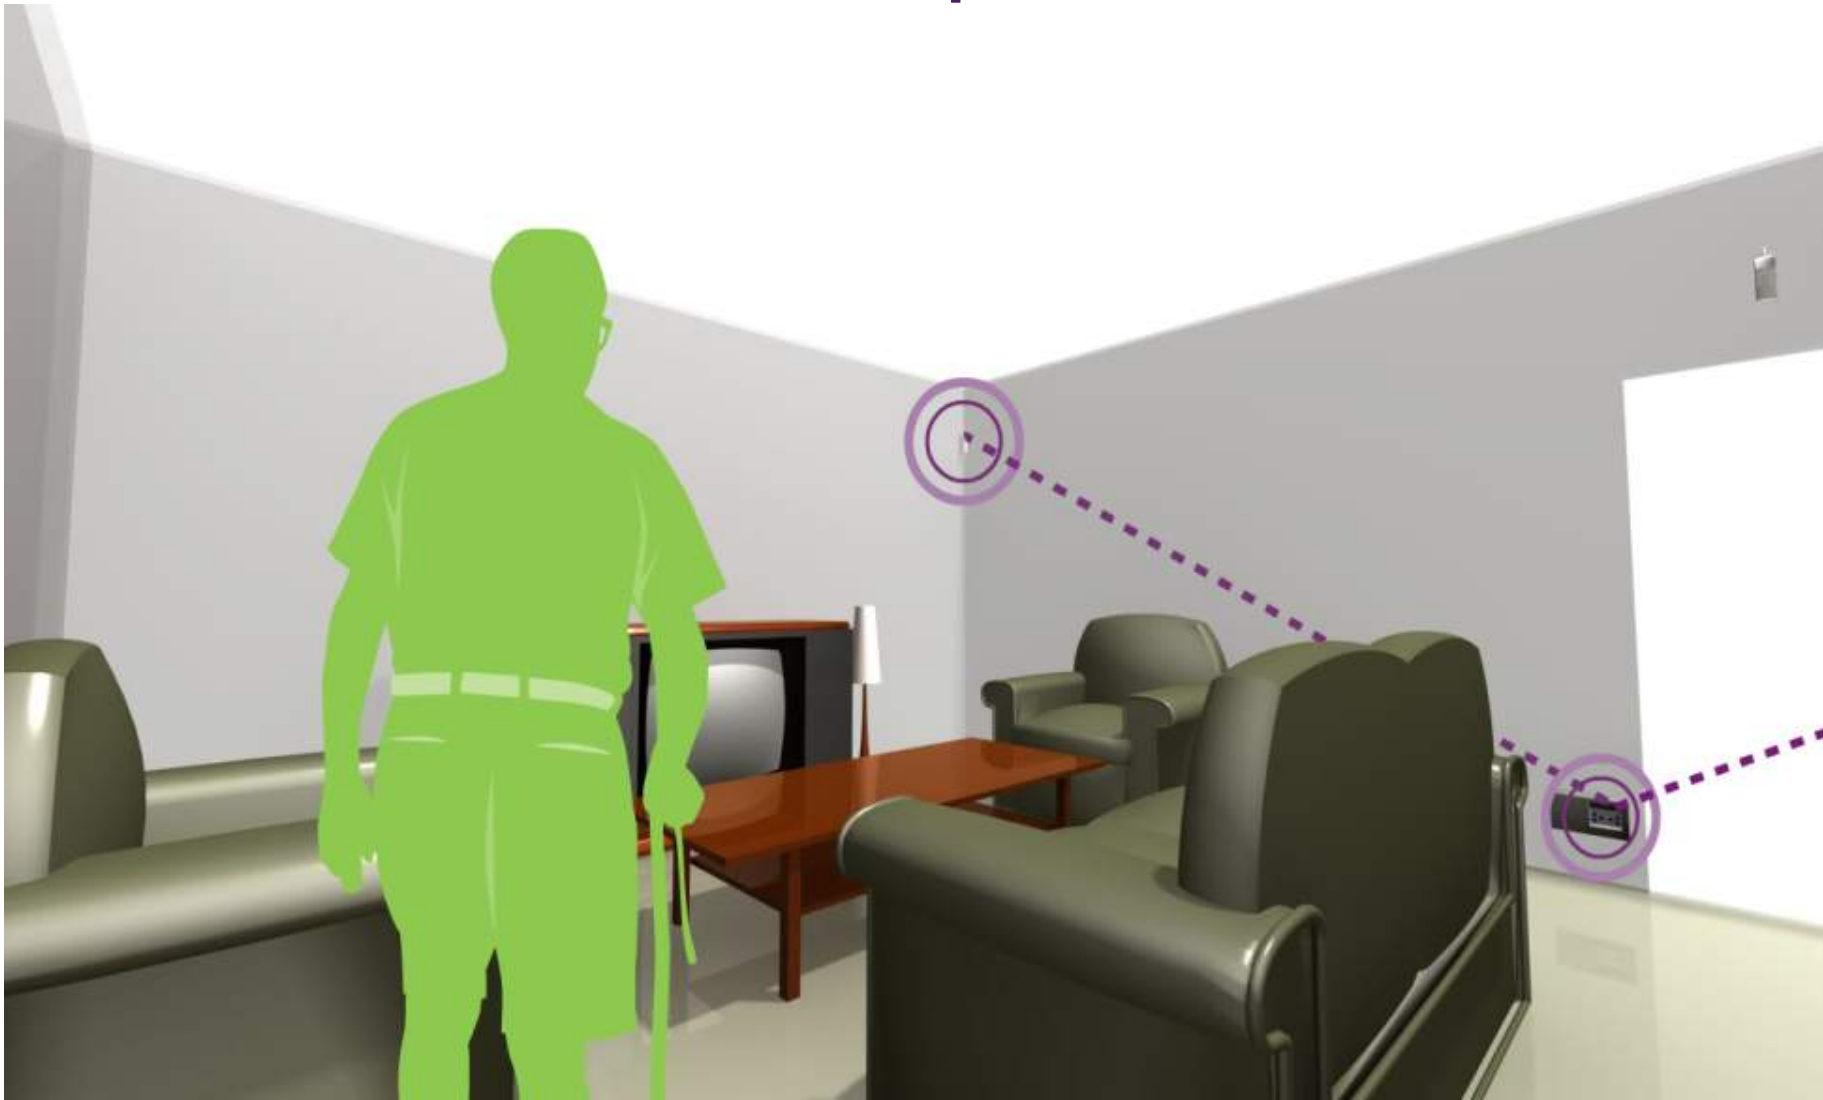

We've invested in technology that helps us to:

- get assistance to you sooner in the event of an emergency....
- identify changes in your daily routine that could possibly indicate emerging health or safety issues....
- continuously assess your well-being so together, we can make smarter decisions about your care needs.

Small, barely noticeable motion sensors monitor your movements. There are no cameras.

Data is sent from the sensors to a secure remote computer.

The computer identifies changes in daily routine that may signal potential emergencies and alerts our staff so they can respond promptly.

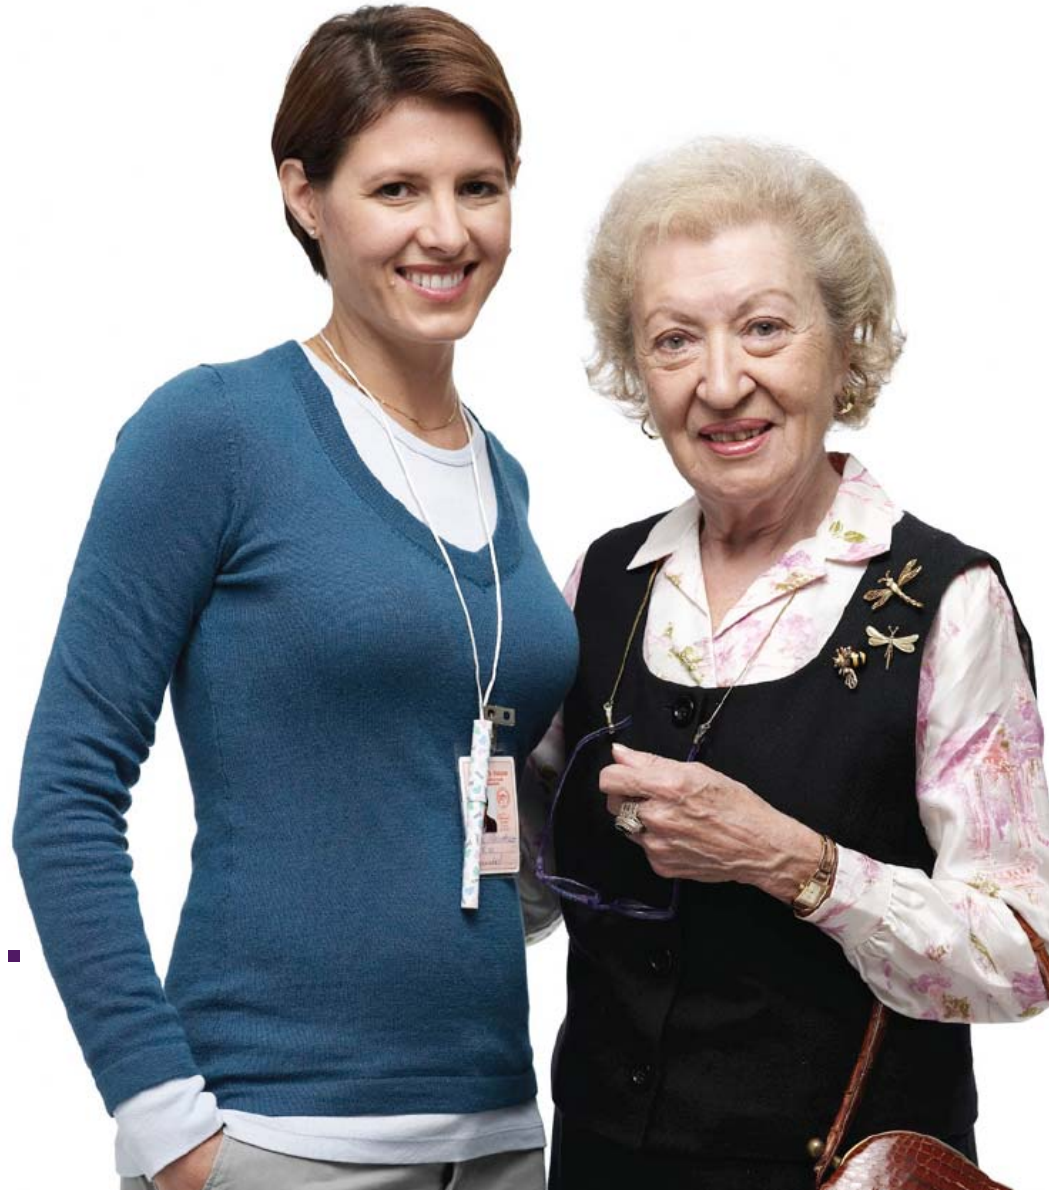

Maybe you are making more bathroom visits at night than normal.

Or, you haven't gotten out of bed in the morning at your usual time.

Most importantly, the information helps us to continuously assess your well-being so together, we can make decisions about your care.

“With the information provided by QuietCare, we’re able to provide more timely and targeted services for each of our residents.”

-- Perry Phillips

QuietCare®

An innovative technology now at **Mulberry Gardens** that enhances the quality of your care!
